

Supplementary Table 1. Non-repository corticotropin injection treatments for rheumatoid arthritis.

RA treatment class	Specific medications
Conventional synthetic DMARDs	Cyclosporine, leflunomide, methotrexate, hydroxychloroquine, thiomalate
Biologic DMARDs	Abatacept, adalimumab, anakinra, belimumab, canakinumab, certolizumab pegol, etanercept, golimumab, infliximab, rilonacept, rituximab, sarilumab, tocilizumab, ustekinumab
Targeted synthetic DMARDs	Apremilast, baricitinib, fostamatinib, ibrutinib, imatinib
Glucocorticoids	Betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone
Non-steroidal anti-inflammatory drugs	Celecoxib, diclofenac, diflunisal, etodolac, fenoprofen, ibuprofen, indomethacin, ketoprofen, ketorolac, meclofenamate, mefenamic acid, meloxicam, nabumetone, naproxen, oxaprozin, piroxicam, salsalate, sulindac, tolmetin
Opioids	Codeine, fentanyl, hydrocodone, hydromorphone, meperidine, morphine, oxycodone

DMARDs, disease-modifying antirheumatic drugs.
